

Lab1 Getting started with NP

Introduction to Human language Technology

Preparations

- Make sure you have administrator rights on your laptop to install whatever you want
- Install software in the same environment (see later), check if you are in the same environment
- Understand the basics of the command line (windows) or terminal (mac, linux)
- Install Anaconda with Python 3.8 or higher
- Familiarise yourself with Jupyter notebooks or labs
- Use a “plain” (not Word) text editor for inspecting data:
 - Windows: Notepad++
 - Mac/Linux: Atom
- Useful (gotta learn that anyway later) install Git to interact with GitHub:
 - Install Git: <https://git-scm.com/book/en/v2/Getting-Started-Installing-Git>

Getting the Lab notebooks

Check regularly for updates

Get the download link

- <https://github.com/cltl/ma-hlt-labs>

- Git installed:

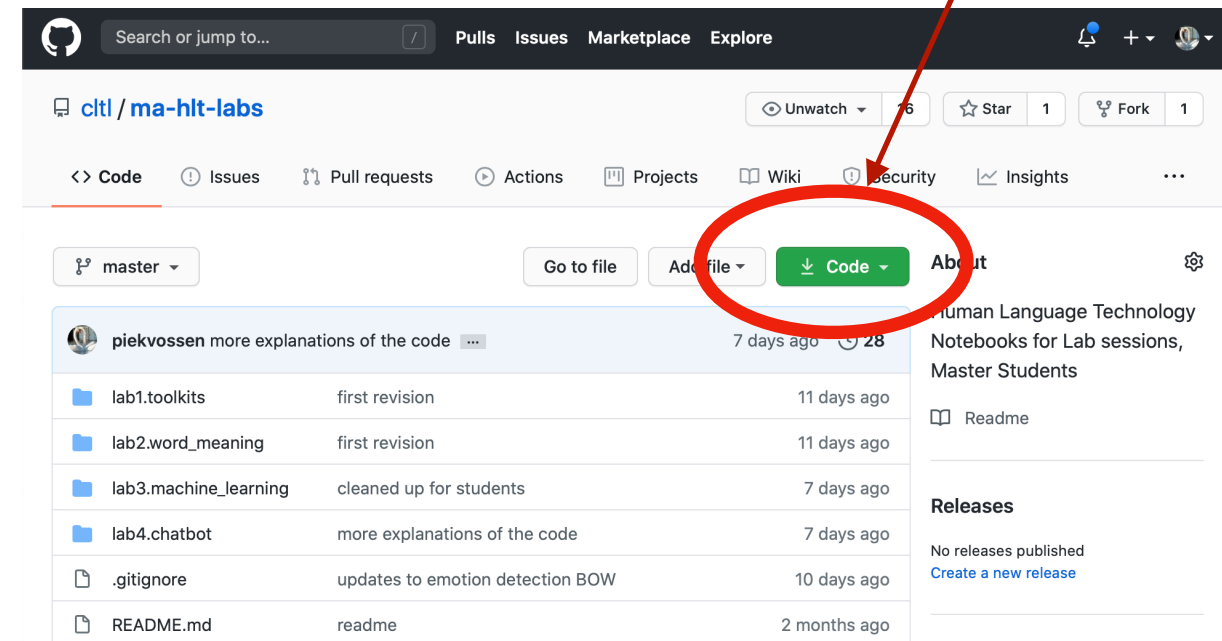

- Clone with ssh:

- `> git clone git@github.com:cltl/ma-hlt-labs.git`

- No local Git installed:

- Download ZIP file

- Unpack anywhere

- /Users/piek/Downloads/ma-hlt-labs/
 - lab1.toolkits
 - lab2.word_meaning
 - lab3.machine_learning
 - Lab4.chatbot
- ma-hlt-labs/
 - lab1.toolkits
 - lab2.word_meaning
 - lab3.machine_learning
 - Lab4.chatbot

Some Git

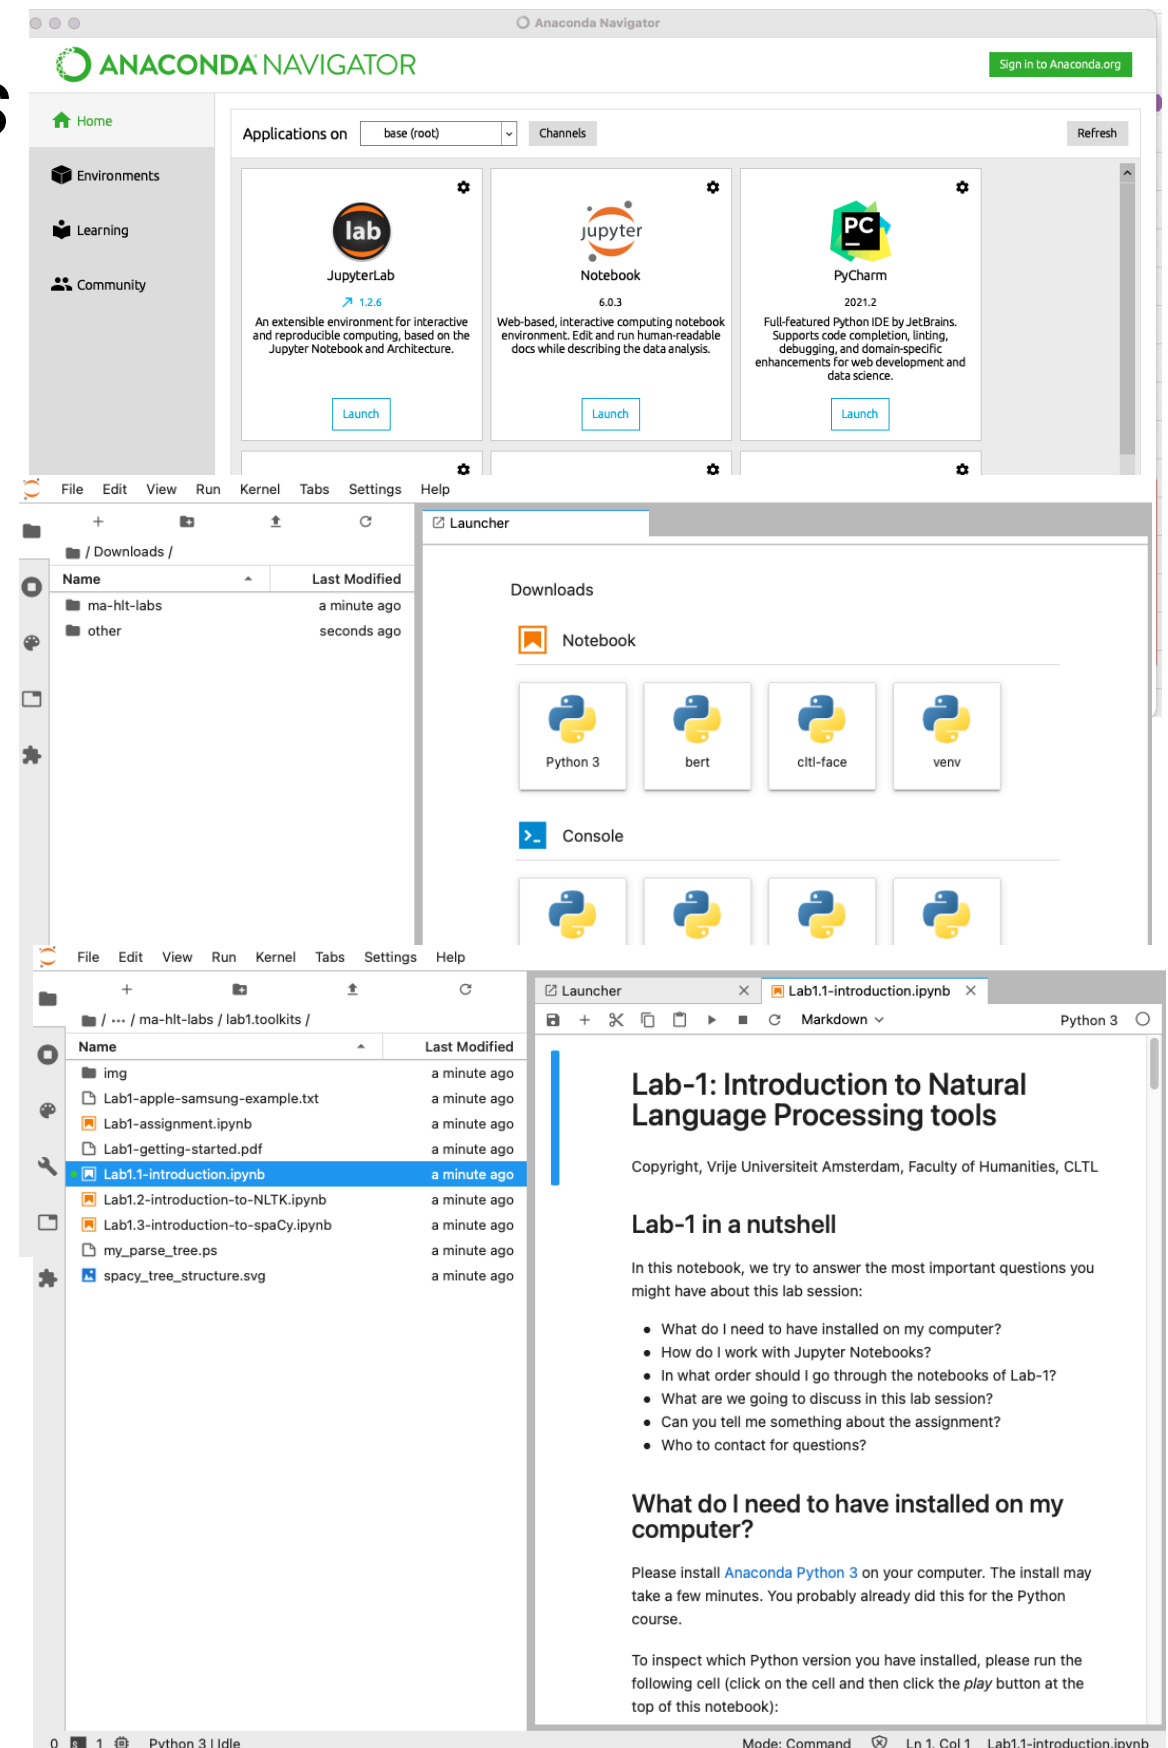

Only for those who use Git from command line

- At any moment in time you can check for updates on the server
 - Use “cd” to navigate to the directory with your local copy
 - This is a git directory (there is an invisible git flag with each file downloaded from a GitHub repository)
 - Type the command: “git pull”
 - Any updates will be downloaded from the server BUT if you changed a file Git will say you are out of sync.
- WARNING:
 - You can change your local copy of the Git repository as much as you like but your local copy is no longer in sync
 - Git will see that there is a difference and refuse to perform “pull” to avoid that your local changes are destroyed:
 - Type the command: “git stash” to ignore your local changes (these are lost) after which you can do “git pull”
 - Rename the directory of your local copy, e.g. “ma-hlt-labs-mine” and do a new “git clone” to get two copies: your local version and the latest version from the server.

Anaconda Navigator

First steps to using notebooks

- After launching the Anaconda GUI you get a window as shown here with various tools
- When click on the launch button in the JupyterLab or JupyterNotebook panel, it will launch a browser with the Jupyter application opening in the Download folder in my case, where I cloned ma-htl-labs from Github
- Entering ma-htl-labs and lab1-toolkits, I find notebook files with the extension .ipynb
- Double clicking on Lab1.1-introduction.ipynb loads the first notebook with all instruction in your browser
- You are ready to go!

Virtual environments

Installing software within a save silo

- When installing many packages with even more dependencies, conflicts may arise between versions
- It is wise to create a new “virtual environment” (venv) first and install and run your code within (a kind of silo to install and run safely)
- Basic instructions can be found here:
 - <https://docs.python.org/3/library/venv.html>
- Two options:
 - Within the Anaconda navigator
 - From command line

Virtual environments

Starting from Anaconda

The screenshot displays the Anaconda Launcher application. On the left, a file explorer sidebar shows a directory structure with folders like 'data-formats', 'hlt_env', 'lab1.toolkits', 'lab2.word_meaning', 'lab3.machine_learning', 'lab4.chatbot', 'lab5.contextualized-models', and 'others'. It also lists files 'getting-started.pdf' and 'README.md'. The main area is titled 'Launcher' and contains a 'Notebook' section with a grid of virtual environments. Each environment is represented by a Python logo icon and a name. The environments shown are 'Python 3', 'chatenv', 'evaluating-conversations-', 'hlt_env', 'thought-selection', 'venv', and 'venv2'. The 'hlt_env' environment is circled in red, indicating it is the selected or active environment.

Name	Last Modified
data-formats	10 months ago
hlt_env	15 minutes ago
lab1.toolkits	21 days ago
lab2.word_meaning	21 days ago
lab3.machine_learning	3 months ago
lab4.chatbot	10 months ago
lab5.contextualized-models	8 months ago
others	9 months ago
getting-started.pdf	2 years ago
README.md	10 months ago

Virtual environments

Installing software within a save silo

Virtual environments

Command line

- Open a terminal and navigate to the folder “ma-hlt-labs”
 - Do: `python -m venv hltl_env`
- Check if the directory “hltl_env” is created locally
 - Do: `source hltl_env/bin/activate`
- Check if your prompt changed from (base):
 - (base) `piek@PTJMs-MacBook-Pro ma-hlt-labs %`
 - TO:
 - (hltl_env) (base) `piek@PTJMs-MacBook-Pro ma-hlt-labs %`

Virtual environments

Command line

- If the prompt changed, the virtual environment is active.
 - Do: pip list
 - This shows the packages activated in this environment

```
(htlt_env) (base) piek@PTJMs-MacBook-Pro ma-hlt-labs % pip list
```

Package	Version
-----	-----
pip	21.2.3
setuptools	57.4.0

- Do: pip install
- Do: pip list

```
(htlt_env) (base) piek@PTJMs-MacBook-Pro ma-hlt-labs % pip list
```

Package	Version
-----	-----
click	8.1.3
joblib	1.1.0
nlTK	3.7
pip	21.2.3
regex	2022.7.9
setuptools	57.4.0
tqdm	4.64.0

- Make jupyter lab/notebook use the new virtual environment “htlt_env”
 - Do: pip install ipykernel
 - Do: python -m ipykernel install --name=htlt_env
 - Do: ipython kernel install --user --name=htlt_env
 - Do: jupyter lab within the virtual environment

Virtual environments

Command line

The screenshot displays the JupyterLab interface. On the left is a file browser with a search bar and a list of files and folders. On the right is a notebook launcher showing various Python environments. The 'hlt_env' environment is circled in red.

File Browser:

Name	Last Modified
data-formats	10 months ago
hlt_env	15 minutes ago
lab1.toolkits	21 days ago
lab2.word_meaning	21 days ago
lab3.machine_learning	3 months ago
lab4.chatbot	10 months ago
lab5.contextualized-models	8 months ago
others	9 months ago
getting-started.pdf	2 years ago
README.md	10 months ago

Notebook Launcher:

- Python 3
- chatvenv
- evaluating-conversations-
- hlt_env** (highlighted)
- thought-selection
- venv
- venv2

Installing software

Software packages and toolkits are installed from command line

- Further instructions can be found on Canvas in the Basic Computer Skills modules
- Linux, Mac (Unix) users can launch a terminal (search for this application and keep it in your dock)
- Windows users can launch a command line window
 - <https://docs.microsoft.com/en-us/windows/terminal/get-started>
 - or
 - Simulate a unix/linux terminal on windows using Git-bash: <https://www.atlassian.com/git/tutorials/git-bash>
 - or
 - Open a terminal from the Anaconda navigator (see next slide for a screen dump)
- In Jupyter notebooks you can also carry out command line instructions in a cell by prefixing it with “%”
 - %ls -l
 - %pip install nltk
 - %mkdir test
 - %cd test
 - Etc.....
